

## Project presentation.

GLDS project's ICO is based on the existing business of exploration and development of gold and alluvial deposits in the Republic of Kazakhstan. The project companies run business according to the legislation of the Republic of Kazakhstan. Exploration and production of noble metal is provided with a full set of permits from regulatory and supervisory authorities of the Republic of Kazakhstan. The deposits belonging to the group of companies are located in the East Kazakhstan Region.

## Deposits.

SGP Group LLP has the right of subsoil use:

1.1 under License No. 59-EL dated April 3, 2019 for exploration of solid minerals, on blocks M-43-33-(10d-5b-16,17,18,21,22) M-43-33-(10r-5r-20,25). It is located in Aktogay District of Karaganda Region, East of Balkhash in 30 km from Akzhaidak railway station, located on the line Mointy-Aktogay.

2.1 under Contract for exploration of solid minerals No. 62-TK dated 26 June 2018 on blocks M-43-94-Г(41,42,43,54,55,56). It is located in East Kazakhstan Region, 75 km Southeast of Ust-Kamenogorsk city and 8 km Southeast of Targyn settlement.

Kalbatay Inter Gold LLP has the right of subsoil use:

3.2 under License No. 292-EL dated September 3, 2019 for exploration of solid minerals, on blocks M-44-105-(10r-5a-13,14,15,19,20,25), M-44-105-(10r-5b-11,16), M-44-105-(10r-5b-4,5).

4.2 under License No. 293-EL dated September 3, 2019 for exploration of solid minerals, on blocks M-44-115-(10a-56-22,25), M-44-115-(10b-5a-16,21).

Both are located in East Kazakhstan Region, 175 km Southeast of Ust-Kamenogorsk city and 8 km Southeast of Kentarlay settlement.

## Prospects for production.

Geological and exploration works' results proved the project's economic feasibility. The alluvial gold reserves amount to about 2000 kg only in the valleys of 4 deposits. The gold reserves in the sulphide-quartz-core formation are estimated at 10 tonnes. The medium-term mining plan is calculated up to 2023, and the entire volume of gold mined at the deposits, according to the current legislation, is subject to compulsory redemption by the National Bank of the Republic of Kazakhstan.

We want to make investments in gold and other precious metals more attractive and accessible for a wide range of investors.

## Information about ICO.

Each GLDS coin is provided with gold equivalent of 0.02 grams

The nominal value of 1 GLDS is 1 dollar, but at the ICO stage the coins can be purchased with bonuses up to 25 percent.

The investment attractiveness of GLGS project is also ensured by the fact that demand for gold already exists, it does not need to be artificially created and stimulated. Given the fact that this noble metal's reserves on the planet are finite, demand will only increase, and this asset's value will increase respectively.

The company plans to buy back tokens on a quarterly basis from November 2020, thus increasing investor confidence in the project and further stimulating the growth in the value of coins.

Token name	GoLDigitStandart
Technical standard	ERC-20
Ticker (symbol)	GLDS
Primary token price	1 USD
Total number of tokens	15 000 000 GLDS
Number of tokens available for sale	10 500 000 GLDS
Soft-cap	\$ 3 500 000
Hard-cap	\$ 10 500 000
